---

Mark,

The below is from the factory:

**the command to turn on the amplifier is not a secret, we have already told that to a number of interested customers. It will be inserted in the next release of the Application Programmer's Guide. For now you can tell the customer the sequence to power on:**

**DTR low  
RTS high  
Pause 1 second  
DTR high  
RTS low**

**There is no a command to obtain the Flex power setting.**

Hope this solves your problem.

73,

Bob H

Bob,

Thanks for letting me know.

Mark,

The factory has opened and I will ask them about your "receive only" question.

Happy Labor Day,

Bob H
